# 1 INTRODUCTION

## 1.1 Problem Domain

Books play an important role in the life of all humans regardless of their age. They introduce us to the world of imagination, and provide us knowledge and many basic skills like reading, writing and speaking while boosting our memory and intelligence. There are many genres of books varying from history, comics, science, philosophy and many more which provide knowledge and pleasure to readers around the world.

Another major difficulty we face is purchasing brand-new books. As we all know, new books are usually on the expensive side. There are many people who struggle to purchase books due to their costs. Both these situations combined have hindered a major hobby of many readers in our country as they are unable to acquire their desired books. This situation has made us understand that this country lacks an online store where customers can order and buy books they desire. We have seen many online stores where people buy many items which saves a lot of time and cost for the customer. This sort of technique is not yet applied in Sri Lanka and hence, we have decided that it's time to provide our enthusiastic readers around the country with the opportunity to get their desired books right to their doorstep with minimum time and effort.

## 1.2 Current Systems and Limitations

There are many libraries and bookstores in Sri Lanka which provide readers with the books they desire. Public libraries and stores like M. D. Gunasena and Vijitha Yapa are premier names in this industry. The whole world is currently facing the COVID-19 pandemic which has affected the daily routine in Sri Lanka as well. Besides essential services, many other usual services including visits to libraries and bookstores are currently unavailable due to the travel restrictions imposed by the Government. Even without such restrictions, it is still a risk for people to visit many places as it will enhance the possibility of a spread of this virus. Another limitation we encounter is the price of new books. As we know, brand-new books are more costly and we see many people not capable of affording new books.

## 1.3 Proposed Objectives and Goals

- To develop a fully functional online bookstore for second-hand books based in Sri Lanka
- To supply books to readers right at their doorstep.
- To find innovative and sustainable solutions to practical problems that arise when buying books.
- To provide an opportunity for customers to buy second hand books which are quality assured at a lower price.
- To provide an opportunity for customers to sell books which they have already used and in good quality.
- To make the system user-friendly to our users by using simple implementation methods.
- To contribute towards grooming the next generation by promoting reading and learning

## 1.4 Proposed Solution

**Shelfs – Online Bookstore**, the latest online bookstore exclusively for all Sri Lankans, is aimed to provide our readers with the books they wish. The uniqueness of this store is that this store carries only second-hand books where we provide customers the opportunity to purchase their favourite books at lower cost than brand-new books, and this also opens the opportunity for customers who are willing to sell their books as well after their quality is assured. This store adopts a delivery system as well, hence our customers are given the luxury of receiving their desired books at their doorstep saving their time and cost. We aim to cover many genres of books, ranging from educational, to comics, to history and many more, providing the best experience to our users around the country

## 1.5 Scope Overview

- In Scope
  - o Web application system for buying and selling books
  - o Registered users can sign up as seller with the approval of admin
  - o Delivery System management
    - Delivery options (Courier or Delivery person) will be based on customer locations*
    - Delivery person can view pending deliveries and pickup locations*
  - o Managing transactions through online payment
  - o Suggestion and complaints facility for customers

- Out of Scope
  - o Salary system of employees
  - o Vehicles used by delivery person
  - o Handling cyber-attacks to website

## 1.6 Assumptions, Constraints and Limitations

### **Technology**

Without definite business registrations obtaining payment gateway facility is tedious.

Therefore, for demonstration purposes a sandbox will be used.

The online bookstore will be available only in the English language and assumes that users have required understanding of the language needed for navigating the website.

### **Finance**

Potential clients who would implement this system as a business have necessary capital to invest for warehouse, delivery vehicles and relevant employees.

### **Resources**

All users of the system have a device capable of browsing web pages. If implemented as a business all employees have said devices to perform their specific tasks.

## 2 FEASIBILITY STUDY

### 2.1 Technical Feasibility

We plan to use HTML, CSS, JavaScript for front end technologies. For the server side we will be using Java EE and MySQL as the database management system. All IDEs used for development are free. Laptops and desktops already owned by group members will be used as hardware.

All the technologies listed above are readily available for usage with the knowledge we already possess, and our team is also willing to enhance their skills in certain technologies which we haven't experienced until now. Hence, the technical feasibility of the project is assured.

### 2.2 Economic Feasibility

We compare the costs with income to determine the economic feasibility of the project.

#### 2.2.1 Costs

**Software and applications:**

We will be using free and open-source software and applications to develop this, as mentioned above. Hence there won't be any costs incurred.

**Hardware:**

There won't be any additional hardware costs as there isn't a necessity for such equipment.

**Utility costs:**

The team will be using their personal routers and internet connections. There will be an increase in data usage but it will be manageable.

#### 2.2.2 Income

- The final selling price of a book that will be displayed in the website will be the selling price stated by the Seller plus an additional 15 percent of the stated price.

- Buyers are required to pay the full amount of the item displayed. This amount is charged only after a customer confirms the purchase of a book.
- There will be an additional cost on delivery for customers who request the books to be delivered.
- Else if customer chooses courier method as the delivery option, courier fees will be calculated and displayed according to the number of books on the shopping cart.

Ultimately, the income from the system outweighs the expenses of the system, which guarantee the economic feasibility of the project.

## 2.3 Legal and Ethical Feasibility

The system does not break any rules or regulations under the law in Sri Lanka, hence there are no legal ramifications in the system.

- Data such as contact number and email of customers are released only when approached to buy books, only with the customer's permission.
- User data will neither be sold to any third party nor used for targeted advertising from external parties.
- All assets and resources used in the system are either open source or used with the proper attribution to the original author.

Considering the above stated facts, as there are no conflicts, the system is legally and ethically feasible.

## 2.4 Operational Feasibility

1. This web application provides solutions for two problems. As we know, brand-new books are relatively expensive to purchase and it's not affordable at all times. Since we focus on second-hand books, the prices of the books sold will be much lower so more people can afford them. The other major problem faced by book readers is their unavailability to travel in order to purchase books especially during pandemic times like this. Through our delivery system, we aim to address this problem by delivering our customers their desired books to their doorstep.

2. Users of the system should have a basic knowledge in IT and English. They require a personal computer or a mobile phone with internet connection to access the web application.
3. Users of the system should have a basic knowledge in online payment transaction mechanisms.
4. As the users are not required to have any special training or HR resources, the system is operationally feasible.

## 3 REQUIREMENTS

### 3.1 Stakeholder Identification

This product will bring an impact and benefit on the following user groups

1. **Buyer** – Actor who purchases books from the website
2. **Seller** – Actor who sells books on the website
3. **Administrator** – Actor who performs the administrative functions of the website
4. **Delivery Person** – Actor who pickups books from the sellers and delivers to the buyers

### 3.2 Functional Requirements

Stakeholder	Available Features
Buyer	<p><b>Browse items</b> Users can scroll the homepage and view all the categorised items or they can search for items, categories etc. If an unregistered user clicks on an item he/she will be asked to log in to the system or to create a new account.</p> <p><b>Add to cart</b> When a user adds books to the cart he/she can view, remove books from the add to cart page. Users can view the total price and the quantity of the items added to the cart.</p> <p><b>Request books</b> Registered users can request for books by giving the title, description, name of the author etc.</p> <p><b>Sign up as a seller</b> Registered users in the Colombo area can sign up as sellers to sell books by providing their NIC. The signup requests will be sent to the admin and when the admin confirms the application they can start selling books.</p> <p><b>Change account details</b></p>

	<p>If a user wishes to change their account details they can change their details by updating the details in the change account details page.</p>
Seller	<p><b>View sales history</b> Sellers can view the history of Sales made in the past. Sellers can view the details of those sales including payment status and other details associated with the particular item that was sold.</p> <p><b>View buyer requests</b> Registered users are given the ability to request for a book that they want publicly. These public requests can be viewed by the Seller.</p> <p><b>Post advertisement</b> In this use case the seller posts an ad for a book where the seller is required to enter the details of the book that he wishes to sell.</p> <p><b>View posted books</b> The seller can view each item that he has put up on the website for sale. Sellers can click on a particular item that has been put on the website and view the details of the post that has been made which can be updated or deleted upon discretion.</p>
Admin	<p><b>Check complaints from the users</b> Admin can receive complaints from the registered users</p> <p><b>Manage users</b> In this function admin can create a user. The admin will input the necessary details for the user and create the new user of the system. Admin can also view existing details of any user. Furthermore, the admin has the ability to remove any users of the system.</p> <p><b>Manage books</b> The admin can manage the books on the system and perform create, update, read and delete operations on books.</p> <p><b>View seller application</b> When buyers want to gain access to be able to sell their own books, they need to register as a verified seller. For this, they will send an</p>

	official request to the admin. The admin then will decide whether the details are valid and then either accept or reject the application.
Delivery Person	<p><b>View buyer and seller contact details</b> Delivery person can view the contact details and contact buyer and seller</p> <p><b>View pending deliveries</b> Admin can assign a task to delivery person and the delivery person can view all the pending deliveries</p> <p><b>View pending pickups</b> Delivery person can view the books from sellers that has to be picked up</p> <p><b>Update pickup</b> When a delivery person completes a pickup he can update the pickup table</p> <p><b>Update delivery</b> When a delivery is done successfully delivery person can update the delivery status</p>

Table 1. Functional Requirements

### 3.3 Quality Attributes

#### 3.3.1 Performance

Source	User
Stimulus	Requesting Webpage
Environment	Normal Execution
Artefact	Requested Web Page
Response	<p>To increase the performance, we will be using a minimal amount of JavaScript and CSS code such that the performance is upheld and also the usability of the system is not compromised.</p> <p>Browser caching will also be made use of to increase load times and reduce no of requests made to servers. These will only make use when it is suitable and not made use of when it is not a suitable situation such as users logging out</p>
Response measure	Average time taken to load requested web pages in the user's web browser.

*Table 2. Quality Attributes - Performance*

#### 3.3.2 Security

Source	Malicious User
Stimulus	Gaining access to Database
Environment	Normal Execution
Artefact	Database
Response	<p>Sensitive information of all users such as passwords will be hashed using SHA-256 Hashing algorithm. Each user's password will be appended to a salt value which will be a unique value (usually) such that even if two users have the same password, the</p>

	hashed value will be different. Therefore, a malicious user will not even know if two people have the same password.
Response measure	Amount of sensitive information a malicious user who has gained access to the database can retrieve.

*Table 3. Quality Attributes - Security*

Source	User (General)
Stimulus	Any request to the web server or any response from the web server with sensitive information.
Environment	Normal Execution
Artefact	Request body, Response body
Response	Using HTTPS protocols for transfer of data between server and client when exchanging sensitive information. HTTPS protocol will provide an encryption facility which will provide an extra layer of security to data moving through the internet and protect it from malicious actors on the internet trying to intercept them.
Response measure	Amount of sensitive information a malicious actor in the internet can retrieve from a request body or response body.

*Table 4. Quality Attributes - Security*

### 3.3.3 Usability

Source	User (General)
Stimulus	User's interface
Environment	Normal Execution
Artefact	Webpages

Response	Users in general will access web pages from a range of devices. Unlike the past a fixed webpage layout will not be suitable for viewing in these many devices. So, we use CSS flexbox and grid functionalities to make them responsive to many screen sizes such that the content of the page is clearly visible to the user and the presentation of the content will not hinder the user's ability to execute his functionality in the system.
Response measure	Ease of use of webpage across many devices

*Table 5. Quality Attributes - Usability*

### 3.3.4 Modifiability

Source	Developer, Software Engineer
Stimulus	Changing of source code of application
Environment	Development environment
Artefact	Source code of the application
Response	Organising the source code in modules such that it is easy to understand the structure of the application. Also Abstracting lengthy functions into separate modules such that code is more concise. Also abstracting helps in making changes to those parts. Then when we make a change, we can only make it at one part and the change will be effective across all components that use it. Else we would have to make changes at several parts and more possibility for irregularities across the changes made at different parts.
Response measure	Ease for developers to make changes to the system's source code

*Table 6. Quality Attributes - Modifiability*

## 4 USE CASE DIAGRAMS

### 4.1 Complete Use Case Diagram

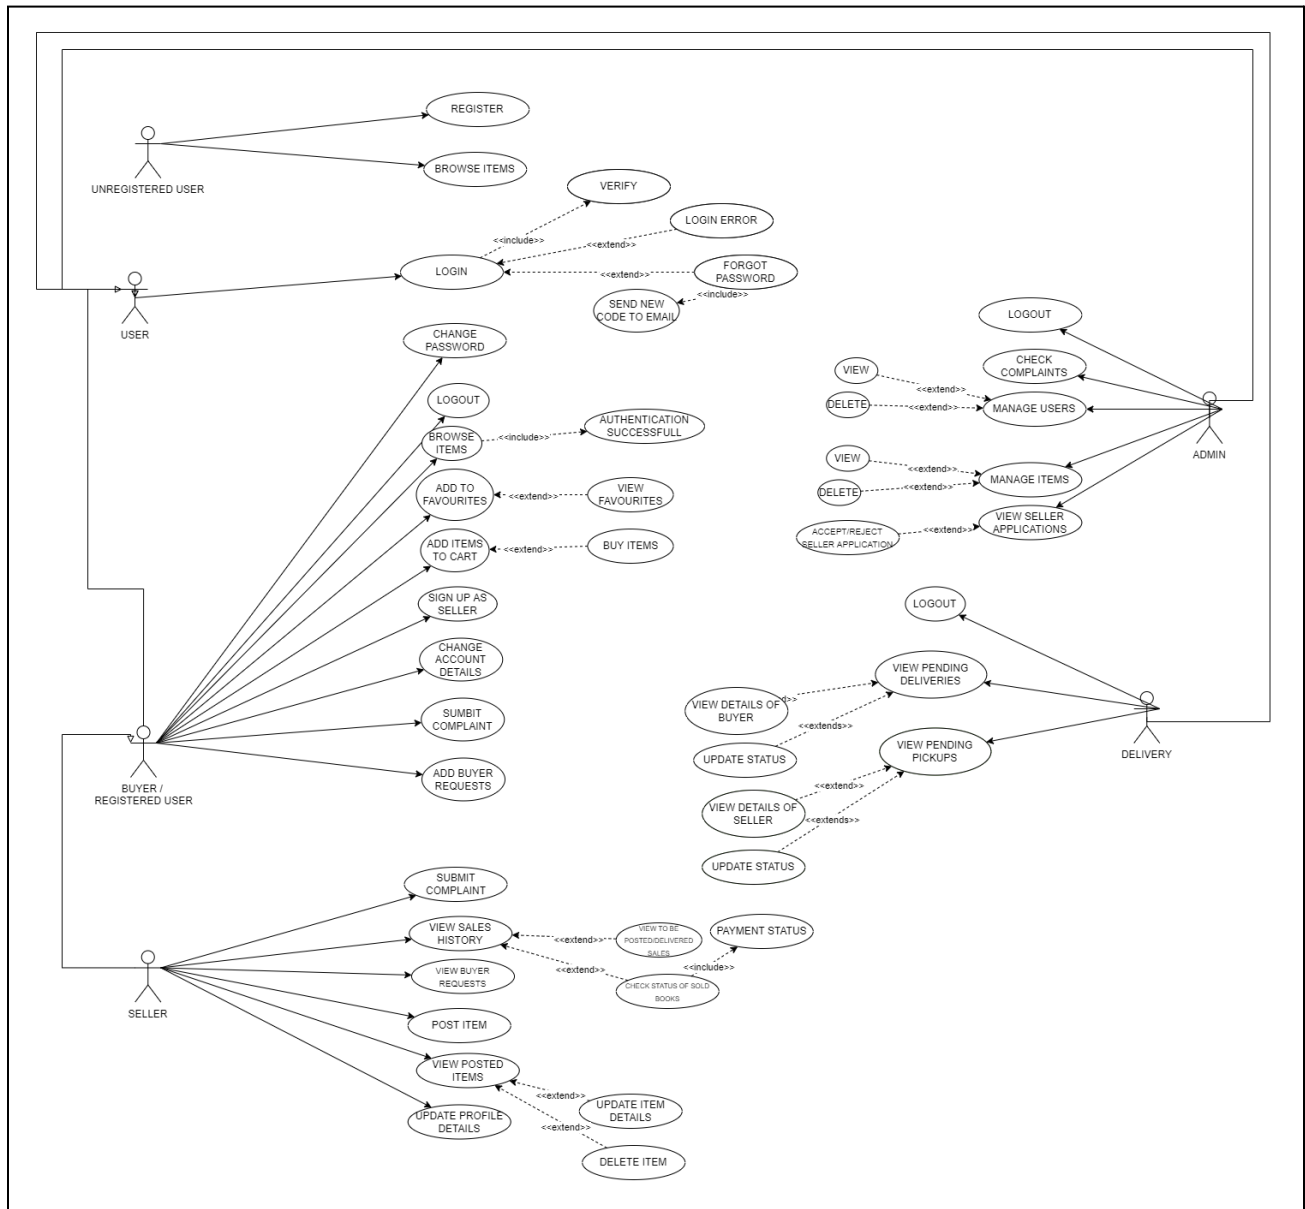

Figure 1. Complete Use case

## 4.2. Buyer

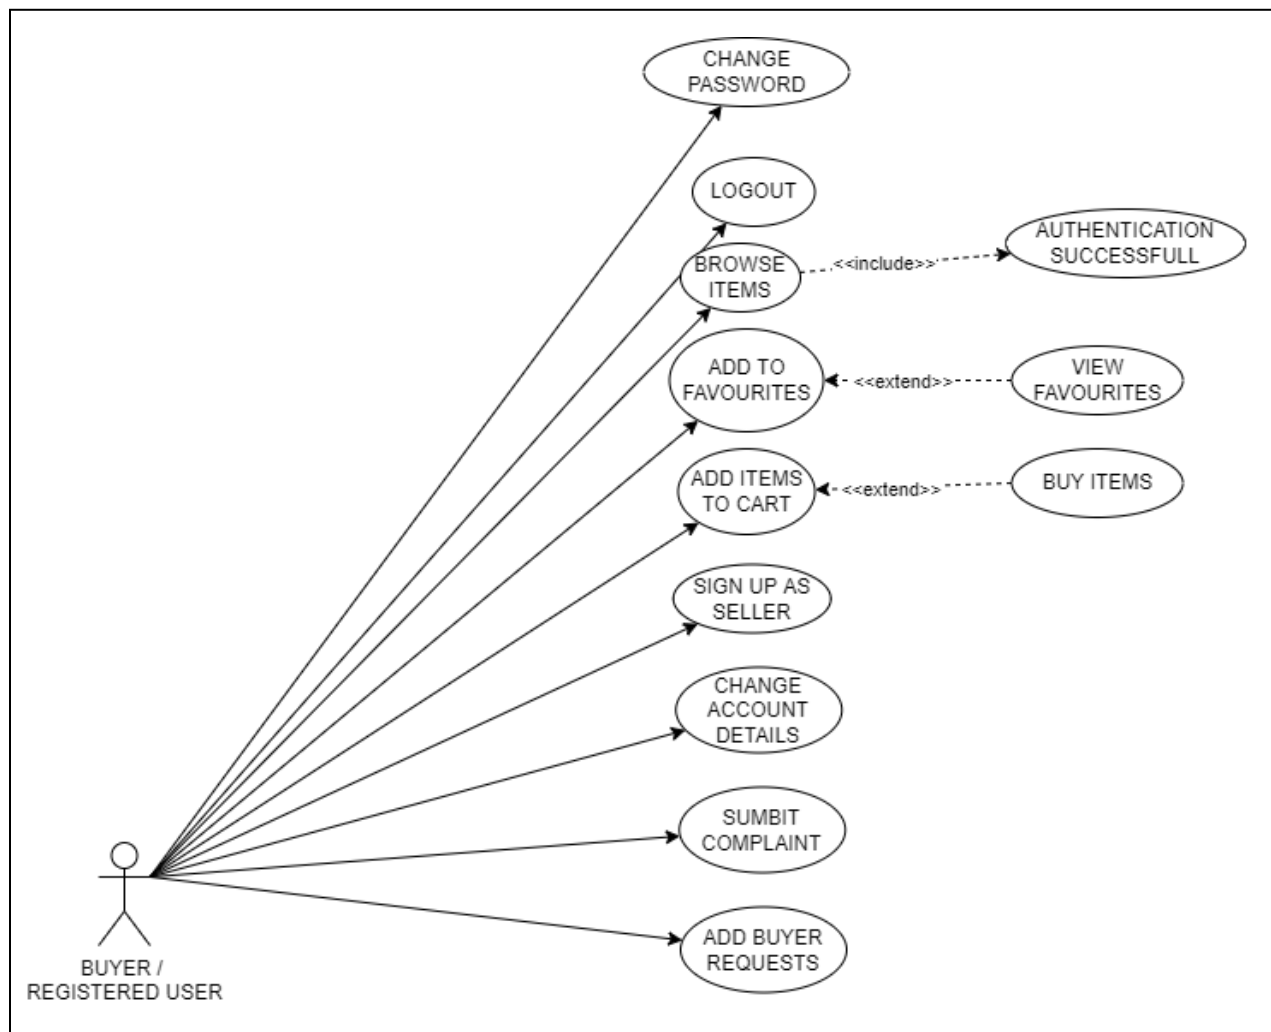

Figure 2. Buyer Use Case

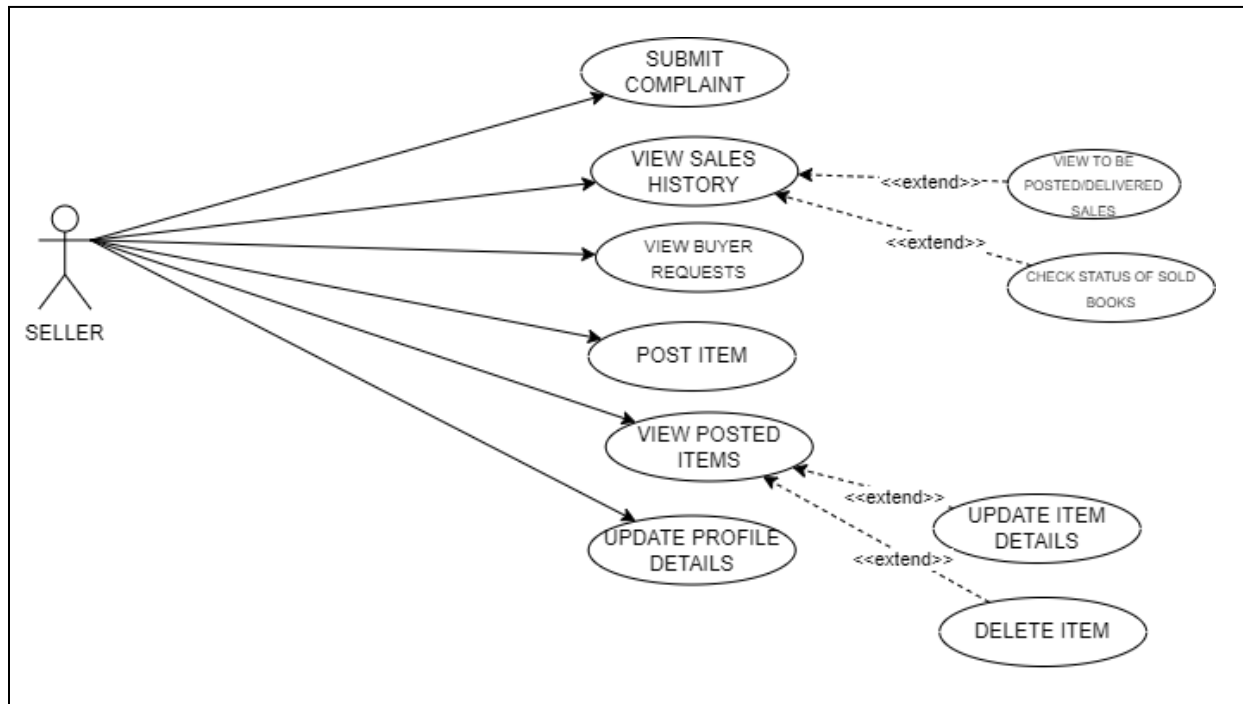

Figure 3. Seller Use case

### 4.4 Delivery Person

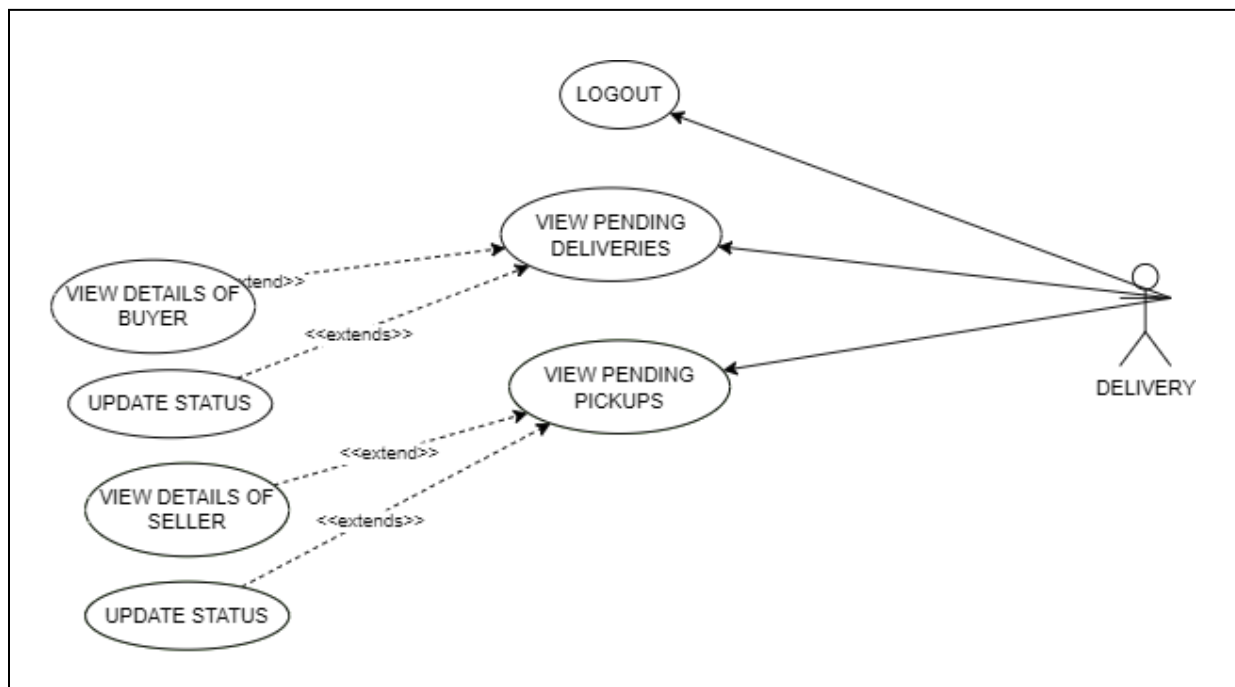

Figure 4. Deliver Person Use Case

## 4.5 Admin

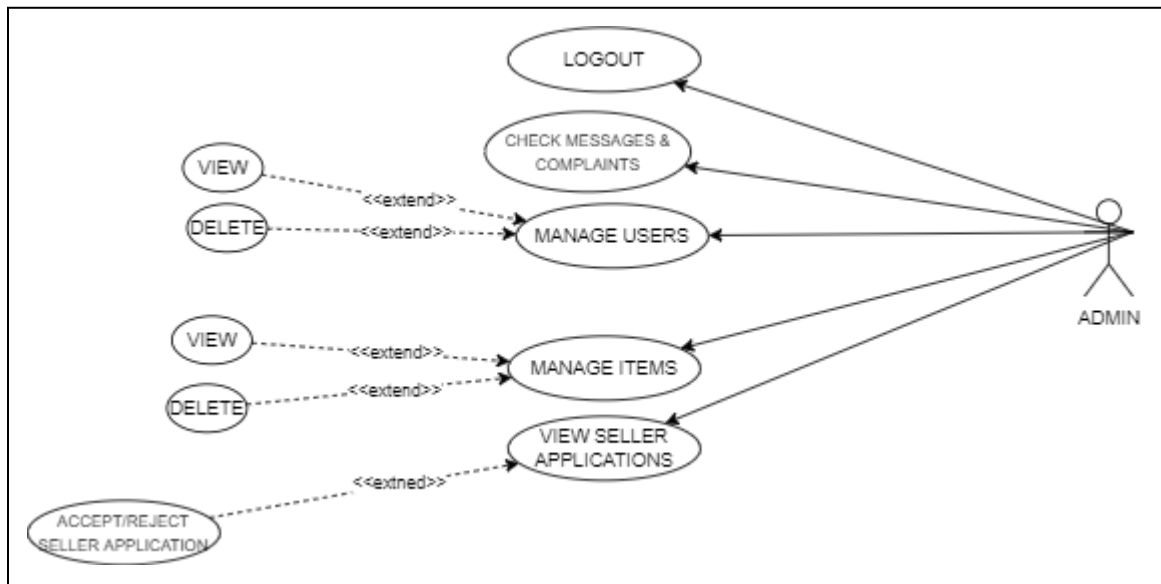

Figure 5. Admin Use Case

## 5 USE CASE NARRATIVES

### 5.1 Buyer

Use Case	Browse items
Summary	User browses the items
Actors	Unregistered user/ Registered user
Pre-Conditions	User has to go to the site link
Main Flow	Users can scroll the homepage and view all the categorised items or they can search for items, categories etc If and unregistered user clicks on an item he/she will be asked to logged in to the system or to create a new account
Exceptions	No exceptions
Post-Conditions	

*Table 7. Buyer: Browse Items (Use Case)*

Use Case	Add to cart
Summary	Registered users can click on item and add them to cart
Actors	Registered user
Pre-Conditions	User has to be logged in to the system
Main Flow	Users can add items to cart and later buy them. When buying items users can choose a payment method and proceed.
Exceptions	If two users tried to add the same item to the cart it would cause a problem. Therefore, to avoid such an issue the second user who

	adds the item will see a loading spinner saying 'Adding item to the cart'. If the first user purchased the item the system will display the message to the second user that the item has already been purchased. But if the first user removes that item from the cart the second user can proceed.
Post-Conditions	Once they purchase the items it will be added to their order list.

Table 8. Buyer: Add to Cart (Use Case)

Use Case	Buyer change account details
Summary	Buyer can change their account details name, address etc
Actors	Buyer (Registered user)
Pre-Conditions	User has to be logged in
Main Flow	Registered users have to go to profile and click on edit profile details. He/she can view current details and make changes to them and save it.
Exceptions	
Post-Conditions	Their details will be updated in the database

Table 9. Buyer: Change account details (Use Case)

Use Case	Request items
Summary	Registered users can request for items
Actors	Registered users
Pre-Conditions	User has to be logged in

Main Flow	Registered users can request items by giving the title, description, cover image etc. Then they can publish the request.
Exceptions	
Post-Conditions	New requests will be sent as a notification to sellers.

Table 10. Buyer: Request Items (Use Case)

Use Case	Sign up as a seller
Summary	Buyer can register as a seller
Actors	Registered users
Pre-Conditions	User has to be logged in
Main Flow	Buyer can go to the account settings and click on sign up as seller and fill the required details and submit it to the admin.
Exceptions	
Post-Conditions	Admin will check the details and decide whether to approve them as a seller or not. If they're approved as sellers, they will be notified.

Table 11. Buyer: Sign up as Seller (Use Case)

## 5.2 Seller

Use Case	Logout
Summary	User Logs out of the System
Actors	Registered User / Buyer, Seller
Pre-Conditions	User has to be Logged In

Main Flow	This is the way that the Registered User who is only a Buyer or a user who is both a Buyer and a Seller Logs out of the System
Exceptions	No exceptions
Post-Conditions	The user is now logged out of the system and cannot perform actions exclusive to registered users. Now treated as unregistered.

Table 12. Seller: Logout (Use Case)

Use Case	View Sales History
Summary	Seller can view details of past Sales
Actors	Seller
Pre-Conditions	Seller is logged in
Main Flow	Sellers can view the history of Sales made in the past. Sellers can view the details of those sales including payment status and other details associated with the particular item that was sold.
Exceptions	No exceptions.
Post-Conditions	

Table 13. Seller: View Sales History (Use Case)

Use Case	View Buyer requests
Summary	Seller can view Buyer Requests
Actors	Seller
Pre-Conditions	Seller has to be logged in
Main Flow	Registered User / Buyers are given the ability to post wanted ads for a book that they want

	publicly. These public requests can be viewed by the Seller and the Seller can then direct the Buyer towards an already existing Advertisement on the website or post the item matching the buyers request and then allow the buyer to buy the product from the said seller by visiting the Advertisement
Exceptions	No exceptions.
Post-Conditions	If a response was sent by a Seller, then the User which placed the request will be able to view it

Table 14. Seller: View Buyer Requests (Use Case)

Use Case	Post Item
Summary	Seller posts new Item for sale
Actors	Seller
Pre-Conditions	Seller has to be logged in
Main Flow	In this use case the seller posts an ad for a book. The seller is required to enter the details of the book that he wishes to sell. Once the details are entered the system will check for any faults in the input and then if everything is validated it will update the database accordingly and start to display the new item in the website.
Exceptions	No exceptions
Post-Conditions	The newly added item will be visible for Buyers to purchase

Table 15. Seller: Post Book (Use Case)

Use Case	View Posted items
----------	-------------------

Summary	Seller views and updates posted items on the system
Actors	Seller
Pre-Conditions	Seller should have posted at least one item
Main Flow	In this use case the seller can view each item that he has put up on the website for sale. Sellers can click on a particular item that has been put on the website and view the details of the post that has been made. Furthermore, he can update details with regard to the post and also he can delete a post. When updating a post, the details of the update will be saved on the database of the system. In the case of a delete the system will change the mode of the posted item such that it will hereafter not be visible to the public
Exceptions	No exceptions
Post-Conditions	If updates or deletes were executed necessary changes will be done in the database.

Table 16. Seller: View Posted Items (Use Case)

Use Case	Update profile details
Summary	Seller updates profile details
Actors	Seller
Pre-Conditions	Seller is logged in
Main Flow	In this use case the seller can update his profile details with regard to his seller account. Seller inputs updated account details and submits. The system will then check for any errors in the input and then update the profile.

Exceptions	No exceptions
Post-Conditions	Seller's profile details will be updated if there are no errors.

Table 17. Seller: Update Profile (Use Case)

## 5.3 Delivery Person

Use Case	Login
Summary	The delivery persons in the system can enter the system and can deliver books.
Actors	Delivery Person
Pre-Conditions	Must have an account created by admin.
Main Flow	<p>Each delivery person is separated by username and password. If they're incorrect, display an error message on the screen that the password is incorrect.</p> <p>If the password and username are correct and the verification is successful, the delivery person can log to the system and can see their home page.</p>
Exceptions	Only the delivery person who has been registered by admin, can log to the system by using a valid username and password.
Post-Conditions	After successful login delivery the person can access his account.

Table 18. Delivery: Login (Use Case)

Use Case	Logout
----------	--------

Summary	The delivery persons in the system can logout and can see the login page in the system.
Actors	Delivery Person
Pre-Conditions	Should have logged in to the system.
Main Flow	Each delivery person can logout and after can see the login page.
Exceptions	Only delivery people who have logged in to the system can logout by clicking the logout button.
Post-Conditions	After logout from the system, return the logging page.

Table 19. Delivery: Logout (Use Case)

Use Case	View pending deliveries
Summary	The delivery person starts the delivery process.
Actors	Delivery Person, Buyer
Pre-Conditions	The delivery person should be assigned to deliver at least one book.
Main Flow	One delivery item can be selected. Then get buyer details (Address, P NO and more). Notice that delivery has begun by contacting. If the delivery person is able to find the location, return the book to the buyer and get evidence, if not, it returns to the store.
Exceptions	Delivery person can only get customer details if he has assigned an order.
Post-Conditions	After delivering books, buyers can get buyers' evidence.

Table 20. Delivery: View Pending Deliveries (Use Case)

Use Case	View pending pickups
Summary	The delivery person completes their job.
Actors	Delivery Person
Pre-Conditions	Must have started the delivery process.
Main Flow	If active in the delivery process, upload buyer evidence for returning books and submit them.
Exceptions	Delivery person can only upload evidence if the delivery process is active.
Post-Conditions	After submitting evidence, it is a successful delivery.

Table 21. Delivery: View Pending Pickups (Use Case)

## 5.4 Admin

Use Case	Login
Summary	Admin logs in to the system
Actors	Admin
Pre-Conditions	No preconditions
Main Flow	Admin enters the username and password for the admin user account. System will check the input for any errors and then check if the username and password is correct. If there are no errors the system will log the admin in. In the case of any errors the correct login details will be needed to be inputted
Exceptions	No exceptions

Post-Conditions	Admin is logged in if no errors and can view the Admin page
-----------------	---

Table 22. Admin: Login (Use Case)

Use Case	Logout
Summary	Admin logs out of the system
Actors	Admin
Pre-Conditions	Admin is logged into the system
Main Flow	Admin clicks the logout button and then the user session will be ended by the system. The admin will be directed to the admin login page
Exceptions	No exceptions
Post-Conditions	Admin is logged out of the system

Table 23. Admin: Logout (Use Case)

Use Case	Check messages and complaints
Summary	Admin check messages and complaints from users
Actors	Admin
Pre-Conditions	No preconditions
Main Flow	Admin can receive messages and complaints from Users such as Buyers and Sellers. These messages will be visible in a section in the Admin's view. From here the admin can read the messages and complaints and can also reply to the messages and complaints.
Exceptions	No exceptions

Post-Conditions	If the admin replied to any messages to the user the reply will be visible to the relevant user
-----------------	---

Table 24. Admin: Check Complaints (Use Case)

Use Case	Manage users
Summary	Admin managers users of the system
Actors	Admin
Pre-Conditions	No preconditions
Main Flow	In this use case Admin can create a user. The admin will input the necessary details for the user and create the new user of the system. Admin can also view existing details of any user. Furthermore, the admin has the ability to delete any users of the system.
Exceptions	No exceptions
Post-Conditions	The actions taken by the admin will be reflected on the system. If the admin created a user the new user can log in. If the admin deletes a specific user the user is no longer part of the system.

Table 25. Admin: Manage Users (Use Case)

Use Case	Manage items
Summary	Admin can manage books on the system
Actors	Admin
Pre-Conditions	No preconditions
Main Flow	In this use case the admin can manage the books on the system. He can perform create, update, read and delete operations on books.

Exceptions	No exceptions
Post-Conditions	If the admin created a book the book will be added for sale. If the admin updates a book those changes will be visible for users, and if deleted a book they will no longer be visible to users for buying.

Table 26. Admin: Manage Items (Use Case)

Use Case	View Seller applications
Summary	Seller accepts or rejects requests to become sellers
Actors	Admin
Pre-Conditions	There are requests from users to become sellers
Main Flow	When a buyer wants to gain access to be able to sell his own books on the system, he needs to register himself as a verified seller. For this purpose, he will send an official request to the admin for this. The admin then will decide whether the details are valid and then either accept or reject the application.
Exceptions	No exceptions
Post-Conditions	If the admin accepted the Users request to become a seller, then that user will now gain the access to sell books on the system as a verified seller.
